

HLA PCR SSP Typing workshop

August 20-21, 2010, Bangalore

SPECIAL POINTS OF INTEREST:

- **SSP Hands –On Lab Training**
- **XM-ONE– transplantation Crossmatch**
- **Arrow-Tool for DNA extraction**
- **Typing with High Resolution kits**

PLENARY SPEAKERS:

- **Olle Olerup, CEO, Olerup SPP AB**
- **Roswitha Keller, CEO, Olerup GmbH**
- **Anna Hedlund, Head of R & D, Olerup SSP AB**
- **Dr . Elango, Chief Operating Officer , Molecular Diagnostics**
- **Mr. Venkatesh Voleti, Director of Sales, Biotron Healthcare.**

Introduction

Olerup is global distributor of molecular diagnostic products and services for HLA typing and antibody detection.

Olerup SSP AB is world leader in the development of kits for genomic HLA typing, a required step prior to a transplantation to match the donor and recipient. The better the match the lower the risk of complications following transplantation. HLA typing is a standard procedure prior to bone marrow transplantations (hematopoietic stem cell transplantations) and is also used in conjunction with or-

gan transplantations (kidney, lung, heart, etc.)

Olerup SSP® genotyping products is easy to learn and easy to teach. All Olerup SSP® genotyping products follow the same protocol for amplification program, which allows you to mix and match your PCR set up as you please.

XM-ONE® provides additional information compared to the currently used lymphocyte cross match tests and therefore improves the basis for risk assessment prior to transplantation.

Olerup's Arrow - for automated isolation of Nucleic Acids and Cells for HLA tissue typing laboratories.
